## **1 Permit**

The owner – Teckids e.V., Rochusstr. 2, 53123 Bonn – hereby issues a revokable permit, free of charge, to the user to use network infrastructure of the society, including access to the internet, within a designated or implicit setting. Unless agreed otherwise, this permit is not exclusive and not transferable.

The owner is permitted at all times to stop operation of the infrastructure completely, partially or for some amount of time, to permit additional users, and to limit, restrict or exclude user access completely, partially or for some amount of time. The owner particularly reserves the right to block access to specific sites or services, such as those promoting violence, or pornographic ones, at its own judgement and at all times.

## **2 Access and account data**

If access and account data, such as usernames, passwords, network access tokens, etc. are handed out, they are only intended for use by the intended user and must not be handed over to others in any situation. The user commits to keeping all credentials secret. The owner is permitted to change any access tokens at its own leisure.

## **3 Advice, Danger**

With respect to providing access to the internet, the owner merely provides precisely that: access. The content transmitted is not checked by owner, especially not whether they contain malware. Use of the internet access is at user's own risk. The owner explicitly notes that malware, such as viruses, trojan horses, worms, etc. can be transmitted to the access device while using the internet.

With respect to providing access to Teckids infrastructure, such as the internal network, the Lunatics learning environment, etc., owner points out that the data and programs provided are not checked for correctness or completeness. Misuse and software errors can cause damage or losses, including on existing mass storage, especially when using the Lunatics learning environment.

## 4 Responsibility and Indemnification

The user is responsible themselves for any data transmitted over the network access, any services utilised, and any acts of legal significance done over it. They are required to adhere to the law when using the network access. Especially, they will:

- not damage any infrastructure of the owner or others;
- not access or distribute immoral, illegal, harassing, defaming, or threatening content;
- not copy, distribute or make public any work protected by copyright and neighbouring laws without being permitted by a valid licence;
- not use the access to send bulk messages (Spam) or other kind of improper advertising material;
- honour prevailing youth protection laws.

The user indemnifies the owner, as well as those members of Teckids e.V. who provide the access personally, from any and all damages, losses and claims by others caused by illegal use of the access by user and / or of the account of user and / or a breach of the Terms of Use; this includes covering any cost and effort required to defend against such claims.

If the user recognises, or must recognise, such a violation of law or breach of contract happening or impending, they must notify the owner or possibly in its stead a member of Teckids e.V. providing access or overseeing the activity.

## 5 Privacy and Data Protection

During utilisation, user especially has to protect any privacy and data protection related interests of the society, its members, and other persons. This explicitly includes both protection of data related to personal information (privacy), and also explicitly keeping systems and infrastructure secure (IT security). In particular, access devices may only be connected with the correct network port assigned to them, such as PXE network vs. guest network.

## 6 Effectivity

These Network Terms of Use generally come into effect by an agreement of use, which imports them by reference to the version of this document ("Fassung"). People who are not members of Teckids e.V. should be asked to sign such agreement while providing personal identification information in order to get an access permit. We have separate documents for the organising society members and those non-members who are co-using the network access.
